

Green Thumb Paper Prototype Report

Becky McConnell, Colin O'Connell, Timothy Childers

Notes/Discussion from Initial Meeting (11/6)

- We discussed which were the most critical pages of our app that would involve the greatest user interactivity and decided on three.
- We also decided who was doing which page and split the designs up individually.
- We drew the paper prototypes during the meeting and discussed what we liked and disliked about each and then implemented those changes in Figma individually.

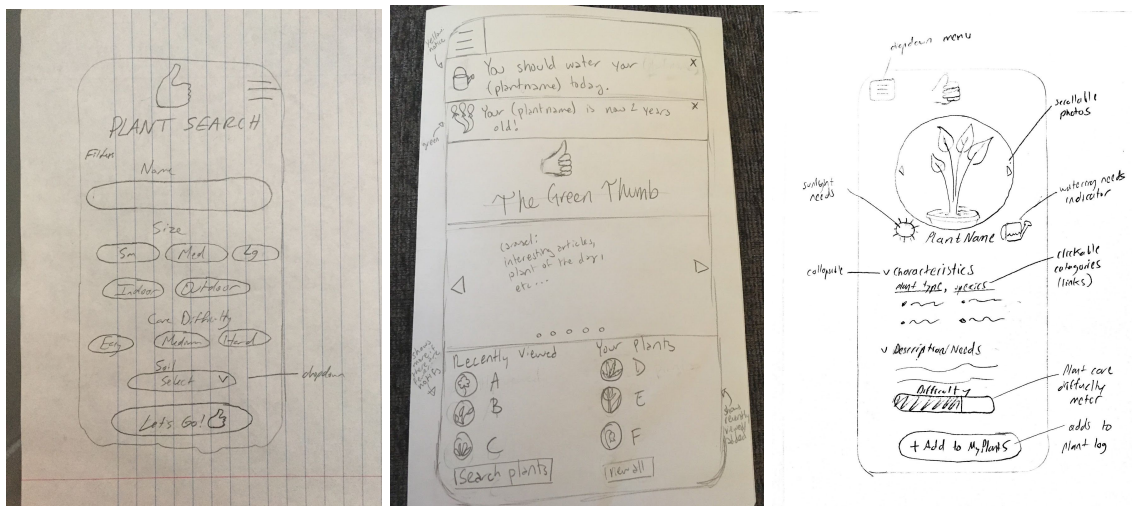

Critical Areas

1. Plant search page
2. Plant info page
3. Home screen

Study Tasks

1. Find a plant without knowing its name
2. Add a plant to your list of plants
3. Learn about a plant you own
